Data Cleaning Using SQL– Summary

SQL Skills Used: Joins, Substrings, CTE's, Case Statements, Window Functions

This project in SQL (Microsoft SQL Server Management Studio) was created to demonstrate a strong foundational knowledge of SQL cleaning queries. Cleaning activities undertaken in this project include converting datatypes, populating missing values, cleaning strings, removing duplicate values, and replacing values. Dataset can be found at: https://www.kaggle.com/datasets/tmthyjames/nashville-housing-data.
