Data Exploration Using SQL – Summary

SQL Skills Used: Aggregate Functions, Joins, CTE's, Window functions, Temp Tables, Views

This project in SQL (Microsoft SQL Server Management Studio) was created to demonstrate a strong foundational knowledge of SQL queries. A COVID-19 dataset was used from https://ourworldindata.org/covid-deaths. The purpose of this exploration is to gain an understanding of global infection, death, and vaccination rates per country. Some queries from this project are used to generate tables for visualizations in the Tableau portion of this portfolio.
